

MYSQL table topics

Free topics

Topic	Data you collect	Why it matters
New launches	mint, name, symbol, creator wallet, launch time, raw JSON	Your main launch database
Creator wallet history	how many tokens each creator launches	Helps detect repeat launchers
Launch time patterns	hour, day, frequency	Shows when market activity is high
Name/symbol trends	meme words, AI words, celebrity names, political names, animal names	Helps identify trend-based launches
Migration events	mint, migration time, raw JSON	Free “success outcome” signal
Time to migration	launch time → migration time	Helps find fast-growing tokens
Creator success rate	creator launches vs creator migrations	Helps rank creators
Duplicate/repeated themes	repeated names/symbols from same creator	Can show spam/factory behavior
Raw JSON archive	save full message exactly as received	Protects you if you later discover useful fields

Table	Needs 0.02 SOL?	Purpose
<code>raw_events</code>	No	Save full launch/migration JSON
<code>creators</code>	No	Store creator wallet history
<code>launches</code>	No	Store new token launches
<code>migrations</code>	No	Store migration events
<code>token_keywords</code>	No	Store name/symbol theme keywords

raw_events = saves the full original JSON

creators = stores creator wallets

launches = stores every new token launch
migrations = stores successful migration events
token_keywords = stores name/symbol theme analysis

Paid Topics

Topic	Data needed	Why it matters
Buy/sell trades	token trade stream	Needed for real momentum analysis
